Modern Engineering Management in Traditional Industries

Igor Blagojevic, P.Eng
RCM Technologies

5:00–6:00 pm, Friday, Jan. 31, 2014, KHE119

ABSTRACT
Engineers are often accused of being brilliant but hard to manage. We hear this time after time, so how do we break this cycle and dispel this perception. In power generation we are asked to be detailed and at the same time quick and responsive to client needs. When millions are at stake the best engineer is often the one that can deliver adequate product on time and not the best product late. I would like to talk to you about the above topics and share my industry experience and observations and help future industry professionals better manage their projects, their time and budgets.

BIOGRAPHY
Igor Blagojevic is Pickering Nuclear Generating Station (PNGS) Portfolio Manager responsible for management of complete portfolio of EPC projects delivered under the Master Services Agreement with Ontario Power Generation (OPG) at Pickering Nuclear Generating Station (PNGS). Responsible for managing OPG projects at Pickering Nuclear Stations in excess of $50,000,000.00. This entails management of all EPC deliverables, project team, vendors, and stakeholders. Responsible for representing RCM at high level meetings with plant Senior VP and Directors.
