Report 1: Using SimpleScalar Simulator

1  Due Date: Week 4, Marking: = 10 Marks

2  Objectives
   - Using SimpleScalar to evaluate performance of applications.
   - Change design parameters in configuration file and find effect on performance.

3  Requirements
   - Report results of the different design options running available compiled applications.
   - Find the performance of a simple C code application (bench.c or others).
   - Generate traces for the C code application.
   - In all simulation try to use Sim-outorder option.
