

Browser issues

The pages in this site conform to recognized public standards (such as HTML4.01 and CSS). This has been verified. Nonetheless, some browser/Operating System combinations render some pages incorrectly (bugs) or in an ugly way (annoyances).

I have used the site with various browsers. The bugs and annoyances I have encountered are described in the following table.

Browser	OS	Bug(s)	Annoyance(s)
Internet Explorer 6.0.29	Windows XP Pro (version 2002 Service Pack 2)	None	Some pages are rendered with the left "menu" overwriting some of the content. (The page "software/local/sim11/DesignAndImplement exhibits this problem.)
Mozilla	Solaris	The "published" information in page headers/footers thinks this is 1970. (This is likely a bug in the javascript interpreter...)	None
